

UPCOMING EVENT DATES

EVENT NAME: School Closure

LOCATION: Vanden High School

DATE(S): August 16, 2020-TBD

EVENT NAME: RPM

LOCATION: Google Meet

DATE(S): December 14, 2020

EVENT NAME: Full Team Meetings

LOCATION: Google Meet

DATE(S): Mondays @ 3:00 PM PST

EVENT NAME: Virtual Coding Camp

LOCATION: Google Meet

DATE(S): Wednesdays @ 3:00 PM PST

THE ROBOPRINT

EDITORS: Sara Wolf

UPCOMING EVENTS...

Build Season

While this year's kickoff will not be a normal celebration, we are still looking forward to our "game" announcement in the first week of January. This year's game is completely virtual, with two brand new challenges to approach- Game Design and Innovation!

Important Fall Events

CalGames

CalGames is a Northern California offseason competition. Our team presented for three awards, one for robot recognition and two for our outreach and media teams. We won the Founder's Award, which was the most prestigious award in the competition and recognizes our outstanding work in spreading STEM and helping our community!

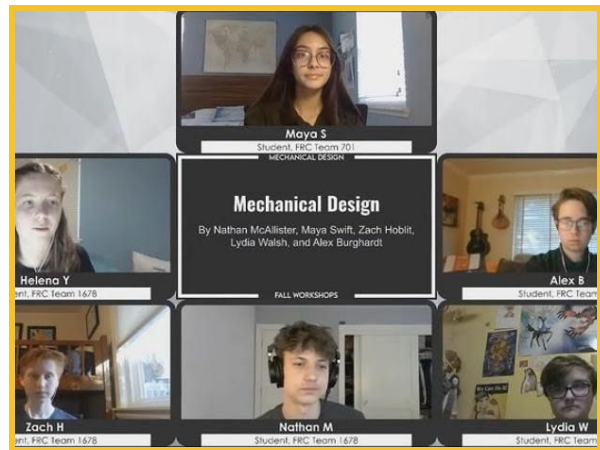

Youth Initiative Program Presentations

In late October, we presented to Delta Sigma Theta Sorority's Youth Initiative Program. A few of our team members and mentors explained the importance of a STEM education to 20 students and their mentors through an interactive presentation, and then worked with them to get started in virtual STEM programs like code.org and scratch programming!

Virtual Coding Camp

Our app programming head, Christina Credo, leads a weekly programming camp with students from elementary schools in our district. While many of these students would typically be participating in after-school robotics programs, we wanted to give students the opportunity to stay engaged in a STEM extracurricular while our district remains in distance-learning. While this camp only launched a few weeks ago, we are excited to continue to work with these students for the remainder of the school year!

Capital City Classic Presentations

Capital City Classic is another offseason Northern-California based competition. This competition is run and hosted by three local robotics teams, but we have been sponsoring the event since 2016. While the hosts decided not to hold a virtual competition, they did continue their annual workshops! Members from our team presented in Mechanical Design, Student Leadership, and Awards workshops. Two team members also created their own Onshape Design workshop that they held on their own! These workshops can be found and viewed on the Citrus Circuits YouTube channel.
